

specialist  
manufacturers in  
metal to the  
architectural,  
retail  
and engineering  
industries

Established in 1994 to produce punched sheet metal products for the computer and motor industries, Nutek entered the retail equipment sector primarily as a sub-contract component manufacturer of electric gates as well as producing components for major American and German retail equipment companies. The company developed several opportunities to supply quality stainless steel tube products as the business increasingly focused on the retail equipment market.

# expertise

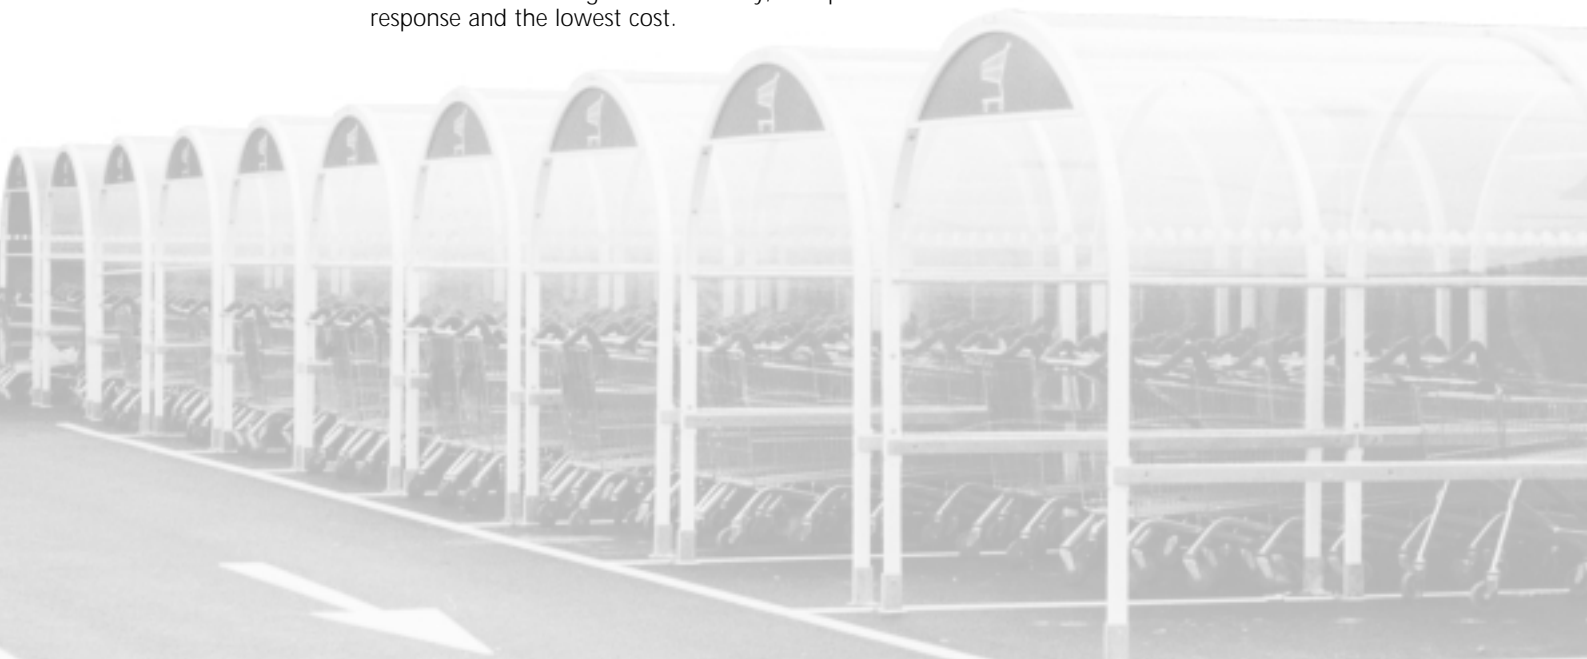

## engineering expertise

In early 2000 the company came under the ownership and management that had made CMB the UK's leading manufacturers of customer guidance products in the 1980s and 1990s. The manufacturing and marketing strategy was reviewed to place greater emphasis on retail and architectural projects. The addition of experienced personnel with design and site installation expertise, matched by an upgrading of the manufacturing capabilities saw Nutek awarded a number of major contracts in the retail and airport sectors.

In 2002 the company has relocated to brand new premises to enhance production capacity and administration facilities in order to handle major projects and multiple site demands. A philosophy of keen pricing with no compromise on quality continues to be adopted. With engineering expertise, knowledge and experience, Nutek are able to give detailed consideration to customers requests and will value engineer products to the most competitive price. As **direct manufacturers** Nutek are able to offer the greatest flexibility, the quickest response and the lowest cost.

Engineering expertise, quality of design and manufacture plus a wealth of experience makes Nutek the perfect partner for the supply of metal products for the retail, architectural and leisure industries.

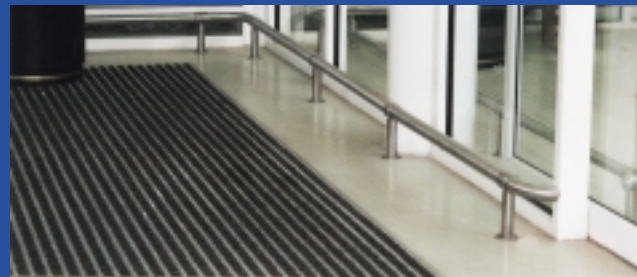

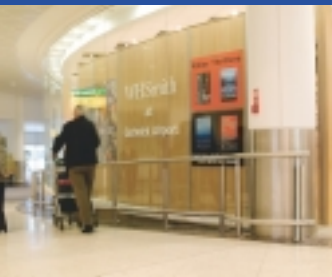

# knowledge

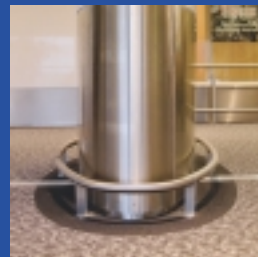

A modern, well equipped manufacturing plant in the UK enables the company to meet the demands of these key and expanding sections of industry. An awareness of the importance of co-ordinated manufacture and installation will ensure that products are produced to the required standard and installed on time. Nutek's installation teams are used to working to the most demanding deadlines and are equipped to undertake projects throughout the UK.

Nutek's standard product range includes:

- Protection rail
- Barrier rail
- Industrial protection rail
- Column protectors
- Mechanical and electric gates
- Stainless steel loops
- Cycle racks and trolley parks
- Covered trolley ports, taxi/bus shelters
- Corner protection posts, bollards
- Screens and balustrade

Special projects can be undertaken from concept design, through to manufacture and installation.
